TERRITORY
RURAL

2 Stud Sires
61 Herd bulls
60 Females

Stock Agent: Scott Riggs & Vendor: Moira Lanzarin

Welcome

It is with pleasure that we are here today for our 3rd Annual Auction.

We are pleased to welcome Scott Riggs and Territory Rural to our team. Together we offer a value packed day and are here to assist with meeting your needs. Feel free to contact either of us for further assistance.

The cattle are “GRASS FED—QUALITY BRED” and ready and capable of going straight out to your paddock to do their job, right now.

Most of our breeding is done under extensive commercial conditions on harsh native country in the Roper Valley (Numul Numul Station). EBV measurements are not possible to be accurately delivered. We therefore offer an alternative method to achieve the same results: i.e the identification of high genetic performers.

***The Cattle Workshop**—jointly presented by Gerald Wyatt and Moira Lanzarin—will discuss these assessments to explain how and why. Survival and Reproduction are the biggest and most important profit drivers in the northern cattle industry. Taste and tenderness cannot be overlooked though. We urge you to attend the complimentary **Cattle Workshop** Friday morning prior to the Auction to hear, see & feel why.*

The assessments provided are offered as a means for further fine-tuning of selection and an opportunity for greater control in the direction you wish to take your herd’s genetic development. Further assessments can be found on our website: www.coodardie.com.au

We look forward to seeing you in Mataranka on Friday 17th of May.

Yours sincerely,

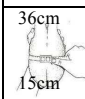

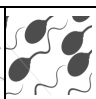

The O’Brien Family

Preparations

The cattle have been run under commercial conditions at Numul Numul station on native pasture. A custom made mineral supplement from Golden Red Rural has been made available to them.

All animals have been inoculated for Botulinum using Pfizer Longrange 1 year vaccination. Paramax pour on has been used in the week prior to sale ready for clearance dipping if moving out of the tick zone.

Semen Evaluation

| | | |
|---|---|---|
| Semen Test | | The bulls have been semen tested sounded by Moira Lanzarin (15 years plus experience in Fertility testing). This involves crush side examination of penis; testicle shape, texture, circumference, length and epididymis; internal palpation and check of seminal vesicles; and collection of sperm to determine semen motility and semen morphology (abnormalities). |
|  |  | |
| 1548 | 97% | |

At Coodardie we consider good scrotal length and predominate epididymis more important than scrotal circumference alone. Therefore we have also recorded the scrotal length and calculated a comparative scrotal value. Epididymis and teat placement have been assessed. 18 point visual assessment is done and used for calculating the Classic F&F (Fertility & Functionality), also called Breed traits, and Meat Traits.

Shown in the catalogue is the scrotal circumference, length and comparative scrotal value plus percent normal sperm. For further assessments please visit our website: www.coodardie.com.au

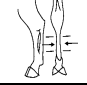

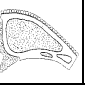

Minimum standards as per Australian Bull Breeding Guidelines for *Bos Indicus* are 28cm for a 2 year old bull, 32cm for a 3 year old bull and 60% normal sperm.

The bulls are guaranteed fertile for 12 months as per conditions of sale (page 29).

It is recommended that bulls be retested every one or two years to ensure optimal performance

Individual Pictorial Assessment Summary CLMS Evaluation (Classic Rating)

Scoring: **1 is best**, 5 is worst (3 is average and 3.5 acceptable)
Highlighted boxes show above average results

| Classic Rating | | | | F&F | Meat | Temp. | Weight |
|--|---|---|---|---|---|---|--|
|  |  |  |  |  |  |  | 10/5/13  |
| 3 | 2 | 3 | 3.5 | 3 | 2.5 | 3 | |

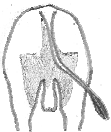

All lots have been assessed by independent livestock consultant, Gerald Wyatt of Classic Livestock Management Services (CLMS) on Breeding (F&F) Traits, Beef traits and temperament. This information is recorded in the pictorial summary for each bull lot (see above). Classic ratings above average are highlighted (less than 3).

Tenderness is closely linked to fertility and therefore considered the most important trait, or a base from which to work. The flatter (or more concave) the bone (felt on the jaw or rib bone and also visible on the hock) the more tender the meat.

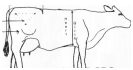

Hormonal activity: Directly related to palatability (taste) and fertility—determined by greasy spine, teat assessment, prominence and position of hair swirls and the softness of the skin. All of these are controlled by the pituitary gland.

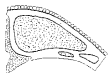

Escutcheon / Milk Quantity: The escutcheon is the pattern made by the hair growth from under the tail to teats and across the back of the legs. These different patterns have been correlated to milk quantity and ability to continue lactating whilst pregnant. (Frenchman F.Guenon mid 1700's) I.e. produce higher weight weaners.

Butter Fat / Milk Quality is determined by the presence of fine, soft hair, yellowish skin and small fatty like scales between the legs, in the tail swish and in the ears. I.e. produce higher weight weaners

Fertility & Functionality Traits (F&F): This is a summary classification of basic form, body shape, angularity, body length, depth, femininity, calving capacity, udder, teats, calving capabilities and reproductive capacity.

Meat Traits: This is a summary classification of head shape/muzzle; eye muscle, front end – neck/shoulders/chine, rear end – rump/hips/leg angle, muscle shape and fat cover.

Temperament: Separates animals from the same management group on their calmness in a confined area at the time of assessment. Animals which are extremely quiet score “1”. Animals that are aggressive or extremely agitated in the crush are scored “5”.

Classic Livestock Management Services (CLMS) is a relatively new company, based on the collective knowledge and stock wisdom from the past. It has developed a grading system for live animals that will produce consistent, quality products and support and encourage the production of livestock using a holistic approach that will lead to an increase in real productivity and sustainability for the industry. It is applicable across all breeds of cattle. Their book, “A Vision Tender: The keys to livestock mastery” documents this work.

The company’s aim is to develop a more universally acceptable method of livestock evaluation that will guarantee quality for consumers.

CLMS have developed an evaluation system that is capable of delivering in excess of a 98% success rate consistently with cattle for high meat quality.

We have identified 18 key confirmation traits that can be visually and kinaesthetically assessed and scored by trained evaluators. These traits concentrate on selecting for breeding purposes i.e. maternal traits, and for meat and milk quality.

The two key areas that we know from consumer feedback to be the most critical for eating quality are a consistency of tenderness and palatability. Interestingly these two characteristics are linked to better herd fertility and higher in essential and healthy unsaturated fats. A win-win all round.

The major advantage of the CLMS system is that it has the capability to select animals on the hoof in a matter of minutes or less, as compared with other meat grading systems that primarily grade after slaughter.

We have established that the required traits can be found in all breeds, although some of the older, less popular breeds tend to have a higher percentage of better grading animals. We think that the popular breeds have been more genetically manipulated in recent years to produce highly only in one or two areas e.g. growth rates and milk quantity.

Coodardie Brahmans

Stud History

Coodardie Brahman stud was formed in 1976 in north Queensland by Mike and Rory O'Brien (MJ and RS O'Brien). From modest beginnings the stud herd grew to a strength of in excess of 1500 registered breeding cows. This was achieved by the largest single stud purchase in Australia – 600 Cherokee stud cows at \$3000 each in 1991.

Coodardie led the way in single stud annual production sales in Charters Towers, north Queensland in 1991 to 1993, as well as holding their own sale in Katherine, Northern Territory in 1990. In 1993 the O'Briens sold their Queensland properties and moved to Carmor Plains Station, NT, taking with them 2500 head of their Coodardie Brahmans.

Coodardie continues a stud and commercial Brahman cattle operation based at Numul Numul and Coodardie Stations near Mataranka in the Northern Territory. Coodardie Brahmans is the trading name of Coodardie Pty Ltd which is owned and operated by two generations of the O'Brien family.

In November 2001 the family sold their NT floodplain station, Carmor Plains, and moved their entire operation, which includes 3000 high quality Brahman cattle, to Numul Numul Station south east of Mataranka. It was at this time at which Coodardie Pty Ltd was formed. Numul Numul is leased from the local Numul Numul Aboriginal Corporation. In 2003, a smaller property, "Coodardie" was formed on the outskirts of Mataranka. It is the home of the core stud herd.

Inspections and visitors always welcome.
